

- **Step1:** Get **a.** (target surface) from GNN ourput
- **Step2:** Get **c.** (template surface) from **b.** (template volumetric)
- **Step3:** Warp **c.** (template surface) to **a.** (target) then get **d.** (waped mesh)
- **Step4:** Predict **e.** (deformation field) from registration process
- **step5:** Apply **e.** (predicted deformation field) on **b.** (template volumetric) then get **f.** (Target Volumetric)

- **a.** Target Surface Mesh
- **b.** Template Volumetric Mesh
- **c.** Template Surface Mesh
- **d.** Warped Template Surface Mesh
- **e.** Deformation Field
- **f.** Target Volumetric Mesh
